Our Awesome Methods

September 26, 2016

1 Materials and Equipment

Including manufacter of equipment...

2 Procedures

These should be detailed enough that ANYONE in the class could follow your procedures and generate similar results. They should be detailed and informative. I suggest each team member work on a section and then have others add to it until it's complete. When you are done, upload the methods to Github/methods using the following naming convention: Method_LABDAY_TEAM#.Rnw (where LABDAY is TUE or WED, and TEAM# is 1-4, Frank's group is Team 1, Wendy's team is Team 2, David's team is Team 3 and Nicole's team is Team 4), for example Method_WED_4.Rnw, where the file can be compiled to a pdf in github.

Note: RStudio doesnt like underscores and hash tags unless they have a backslash in front of them!
